

SERHII DUDAR

LEAD / SENIOR JAVA SOFTWARE ENGINEER

+380 93 010 5209 | serhii.dudar@protonmail.com | linkedin.com/in/serhii-dudar
Vinnytsia, Ukraine · Remote

Summary

Software engineer with over **13 years** of experience creating solutions ranging from server applications to SDKs and client apps, with **Java** as my main focus in recent years. My expertise covers **microservices architecture**, **high-load** and event-driven systems (**Kafka**, Kafka Streams), reactive services, concurrency, performance optimization and software design. I follow Clean Architecture and solid engineering practices to keep code extensible, fast and easy to maintain. I have experience in **technical leadership roles**, owning project domains and driving architecture decisions through to delivery. Currently working on a **payments platform** for one of the largest banks in Ukraine. Strong background in C#/.NET, TypeScript/JavaScript, Bash, Python and Lua.

Skills

- **Languages:** Java, SQL, Python, Bash, Lua, TypeScript, JavaScript, C#
- **Backend:** Spring Boot, Spring Cloud, Spring WebFlux, Project Reactor, RxJava, Hibernate, JDBC, R2DBC, jOOQ, JDBI, QueryDSL, GraphQL (DGS, Apollo), OAuth2 / JWT, Keycloak, Vault, Apache Camel, Quartz, Netty, Node.js
- **Architecture:** Microservices, event-driven architecture, Event Sourcing, CQRS, Clean / Hexagonal Architecture, REST, OpenAPI
- **Messaging & streaming:** Apache Kafka, Kafka Streams, Kafka Connect, RabbitMQ, JMS, Axon Server, Temporal
- **Databases & caching:** PostgreSQL, DynamoDB, MySQL, MS SQL Server, MongoDB, Redis, Amazon ElastiCache, Hazelcast, Elasticsearch, S3, MinIO
- **Serialization:** Apache Avro, Protobuf, JSON, XML
- **Cloud & DevOps:** AWS, Azure, Google Cloud, Kubernetes, Helm, ArgoCD, Docker, Git, GitLab
- **Testing:** JUnit, AssertJ, JMockit, Testcontainers, WireMock, REST Assured, Cucumber
- **Performance & observability:** JProfiler, VisualVM, JMeter, Jaeger, Grafana, OpenSearch
- **Build & libraries:** Maven, Gradle, Lombok, MapStruct, Jackson, Guava, StreamEx, Immutables
- **Tools:** Neovim, k9s, AKHQ, Insomnia, SonarQube, Jira, Confluence
- **Frontend (earlier projects):** React, Angular, JavaFX, WPF

Education

Vinnytsia National Technical University — 2007 – 2012
Specialist Degree (Master's equivalent), Computer Engineering

Languages

English: Upper-Intermediate (B2)
Ukrainian: Native

Experience

Raiffeisen Bank Ukraine — Oct 2024 – Present
Senior Java Software Engineer

Project: Payments platform: domestic and international payment processing for one of the largest banks in Ukraine.

Responsibilities:
- Building reactive payment microservices and shared infrastructure libraries used across the payments teams;
- Implementing National Bank of Ukraine (NBU) regulatory requirements and integrations with SEP, the NBU interbank payment system;
- Developing multi-directional payment flows and ISO 20022 payment messaging;
- Driving architecture improvements, code reviews, performance optimization and investigation of cloud and infrastructure issues, monitoring.

TECHNOLOGIES: Java 25, Spring Boot 4, Spring WebFlux, Project Reactor, PostgreSQL, DynamoDB, Redis, Apache Kafka, Kafka Streams, Apache Avro, Protobuf, AWS, Kubernetes, Helm, ArgoCD, Rego (OPA), OpenSearch, Grafana, Jaeger, JUnit 6, AssertJ, JMockit, Bash, Python, Lua

GlobalLogic — Mar 2024 – Oct 2024
Lead Java Software Engineer

Project: 360 Pass: passenger transportation platform in the EU.

Responsibilities:
- Technical lead of the Ticketing domain;
- Designing and developing new microservices and features;
- Architecture decisions, code reviews, refactoring and performance optimization;
- Investigating and resolving cloud and infrastructure issues.

TECHNOLOGIES: Java 21, Spring Boot 3, GraalVM Native Image, PostgreSQL, Redis, Apache Kafka, Kafka Streams, Apache Avro, CloudEvents, Temporal, QueryDSL, Keycloak, Azure, Kubernetes, Helm, MinIO, Cucumber, JUnit 5, AssertJ

Digitally Inspired
Senior / Lead Java Software Engineer

May 2021 – Mar 2024

Project: City Plumbing: e-commerce platform of one of the UK's largest builders' merchants, supplying tens of thousands of trade products for delivery or collection.

Responsibilities:
- Technical lead of the Order and Checkout domains.

Main achievements:
- Led development of the Orders domain: microservices, third-party integrations, sinks and consumers. Built an asynchronous Kafka-based flow that synchronizes orders from multiple sources, normalizes them and integrates with the legacy system, including recovery flows and notifications;
- Designed order synchronization between two major systems that cut expensive calls by fetching on demand and reacting to order notifications;
- Built real-time order status tracking on top of the legacy system, so customers can follow order progress;
- Reworked the legacy-system proxy service with Kafka Streams, improving connection management and significantly reducing licensing costs;
- Engineered a concurrent TCP connection factory for PED card terminals, the foundation of the platform's in-store payments;
- Built a lightweight full-text search on PostgreSQL (tsvector / tsquery) that powers search across the platform without paid services such as Elasticsearch or Algolia;
- Optimized complex SQL queries, improving database performance;
- Introduced Clean Architecture together with other leads as the standard for new and refactored services, simplifying support and onboarding of new client services.

TECHNOLOGIES: Java 11–21, Spring Boot, Project Reactor, RxJava, Netty, PostgreSQL, Redis, Elasticsearch, Apache Kafka, Kafka Streams, Kafka Connect, Apache Avro, JDBC, R2DBC, JDBI, jOOQ, GraphQL (DGS, Apollo Federation), Node.js, AWS, S3, Kubernetes, Helm, Vault, Keycloak, Jaeger, GitLab, Gradle, Cucumber, JUnit 5, AssertJ

Sweetcode Lab
Senior Java Software Engineer

Apr 2019 – May 2021

Project: Natura ERP: ERP system for a large California cultivation and manufacturing company supplying licensed retailers and brands.

Responsibilities:
- Technical lead of the project; owner of the system architecture.

Main achievements:
- Built the core microservice infrastructure from scratch;
- Introduced Axon Framework with strict Event Sourcing and CQRS, solving a number of long-standing business issues;
- Moved the server side to Project Reactor and Netty and parallelized heavy computations, nearly **halving CPU and RAM usage** at the same API throughput;
- Integrated with METRC, the US government compliance system for tracking regulated products;
- Created a JavaFX printing application for factory machines, letting workers print QR codes and documents straight from the ERP;
- Implemented real-time delivery tracking with a customized Google Maps integration.

TECHNOLOGIES: Java 11, Spring Boot 2, Spring Cloud, Project Reactor, Netty, RSocket, Axon Framework 4, Axon Server, Apache Kafka, MongoDB, Quartz, OAuth2 / JWT, Google Cloud, Kubernetes, Maven, JUnit, Testcontainers, WireMock, REST Assured | React, React Native, Redux, TypeScript, RxJS, JavaFX

Project: Capna ERP: distributed system managing the product flow from factories to distributors, retailers and clients.

Main achievements:
- Migrated the system from PHP to Spring Boot microservices while extending existing functionality and adding new features, enabling the business to **double its operations within 8 months**.

TECHNOLOGIES: Java 8, Spring Boot 2, Spring Cloud (Eureka, Ribbon, Circuit Breaker), Quartz, MySQL, RabbitMQ, GraphQL | React, Redux, TypeScript, RxJS

Project: Bank Connect: aggregation of a user's accounts across multiple banks (American Express, CartaChiara, CartaAziende and others) into one system for data processing and analysis.

TECHNOLOGIES: Java 8, Spring Boot, MapStruct, Apache Commons, JUnit

---

Sweetcode Lab
Senior C# / .NET Full-Stack Software Engineer

Oct 2018 – Apr 2019

Project: Elitconnect: property market management system in the USA.

Main achievements:
- Introduced Event Sourcing and CQRS, enabling the system to collect key business metrics on demand and scale with the business, which brought significant financial gains within six months.

TECHNOLOGIES: C# 7, .NET Framework 4.7, .NET Core, Mono, Rx.NET, Nancy, MySQL, MongoDB, WebSockets, AutoMapper, NLog, NUnit, Moq | Angular 6, Redux, TypeScript, RxJS, Karma, Jasmine

---

ONSEO
Java Full-Stack Software Engineer

Nov 2017 – Oct 2018

Project: Gamesys: one of the UK's largest online gaming platforms.

Responsibilities:
- Integrating and supporting third-party game providers on the platform.

Main achievements:
- Built a solution that collects client statistics across game-session events, enabling cheat-detection filters and bringing significant cost savings.

TECHNOLOGIES: Java 8, Spring Framework 5, Apache Camel, Apache Kafka, Docker, Kubernetes, JMeter, JProfiler, SonarQube, JUnit, REST Assured, WireMock

---

WinInteractive
C# / .NET Full-Stack Software Engineer

Feb 2017 – Nov 2017

Project: Bwin: one of the world's largest sports betting platforms.

Main achievements:
- Built a framework for dynamic, configurable web forms generated on the fly (ASP.NET, WebSockets, AngularJS, CRM) with flexible validation, views and input types, saving substantial time and cost for multiple development teams.

TECHNOLOGIES: C# 7, ASP.NET MVC 5, Web API 2, OWIN, Sitecore, Log4Net, NUnit | TypeScript, AngularJS, Angular 4, Webpack, Karma, Jasmine, Protractor, Selenium

---

WaveAccess
C# / .NET and Java Full-Stack Software Engineer

Feb 2013 – Feb 2017

Project: Indasoft TSDB: distributed high-load system for storing and processing large volumes of industrial time-series data.

Responsibilities:
- Project lead; system architecture, technology evaluation and selection (NoSQL databases, caching).

Main achievements:
- Engineered an API that processes **100–10,000 requests within a fraction of a second** for factory sensor metrics (temperature, pressure and more), with real-time analysis, compression and storage. Factories scaled production capacity **up to 8x** (vs. the planned 5x), largely thanks to concurrency and runtime optimizations;
- Developed a client SDK that uses Protobuf and batching to transmit large data volumes to the API efficiently.

TECHNOLOGIES: C#, .NET Framework 4.6, Web API 2, Java 8, Spring Framework, Apache Cassandra, KairosDB, Redis, RabbitMQ, Protobuf, SignalR, OPC, SQL Server, Entity Framework 6, WPF

Other projects: 10 web, CRM and internal systems, including a large UK job-search portal (MyWorkSearch), Microsoft Dynamics CRM integrations, a WCF service generator, document-lifecycle and time-tracking systems.
Technologies: C#, ASP.NET MVC / Web Forms, Web API, WCF, Entity Framework, NHibernate, MS SQL Server, Umbraco | JavaScript, Angular, Knockout, jQuery, Kendo UI
